

Resources for Landscape Photography

As landscape photography is one of the most popular of the photography genres, there is a wide range of available resources. The following is intended to be a useful guide without being exhaustive. A web-search for landscape photography produces many more resources than those listed here. There are many 'how-to' books available ranging in price from free to very expensive.

In addition to these books, which cover techniques, there are many books of landscape photographs which show examples of the art of landscape photography.

The following websites;

<https://www.phototraces.com/creative-photography/famous-landscape-photographers/>

<https://www.photoblog.com/learn/best-landscape-photographers/>

list a few of the many famous landscape photographers.

Some of these books can be obtained from several booksellers and on-line sites and a few are available secondhand from sites such as World of Books.

Libraries Tasmania has a large number of books on landscape photography, including works by local photographers such as Philip Kuruvita, Cam Blake and Owen Hughes.

Books

Videos

As landscape photography is such a popular genre, there are many videos available.

Authors on YouTube include;

Mark Denney, Michael Widell, Nigel Danson, Attilio Ruffo, Lynne Luxon-Jones, Taylor Jackson, Andrew Marr, Mads Peter Iversen and others.

Some of these videos cover post-processing techniques for landscape photography as well as field and composition techniques.

Software

As the nature and direction of the light is important in landscape photography, many photographers use apps which show the times of sunrise, sunset and golden hour. Apps also show the direction of the sun and moon and other features useful in night and astrophotography. Popular apps include;

The Photographer's Ephemeris (TPE) and PhotoPills.

Both are available at low cost.
